

DESIGN DOCUMENT FOR Flashcard Software

For course: Software Engineering

***** Group 1:**

- Nguyễn Việt Anh
- Bùi Thị Phương Anh
- Trần Thị Thoa
- Phạm Nguyễn Khánh Phong
- Trần Vũ Hải

1. Requirement Specification :

Flash card is a method that combining English word and a corresponding image to help people remembering words more easily and having fun with learning English.

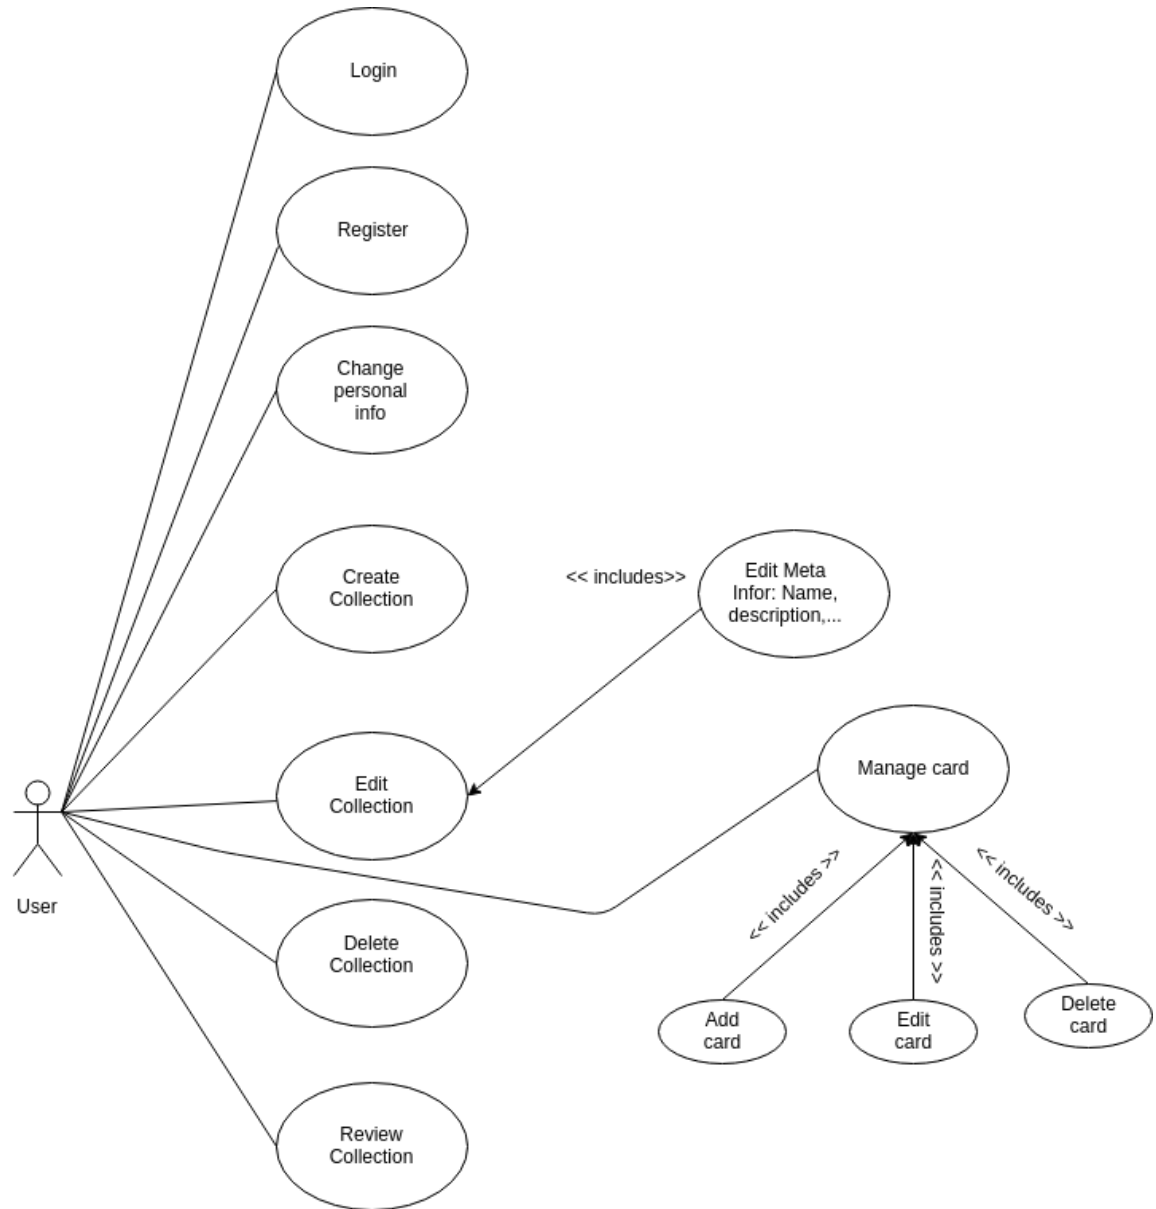

Main feature:

- + Visualize flashcards, Flashcard collections on the computer screen so that people can use to learning without buying their paper collections.
- + Can be used in multiple platform (firstly on web and PC application) to learn every where.
- + Help people in using available Flashcard collections, creating/editing their own collections.

3. Web APIs

The APIs in this part are used in communication between server (Node.js) and clients (Web frontend and PC application).

3.1. Dictionary

- E-V Dictionary Lookup:

GET: /api/dictionary/ev?lookup=<word>

3.2. User management

- User Register

POST: /api/user/register

params:

```
{  
    'username': '<username>',  
    'password': '<password>',  
    'email': '<password>',  
    'fullname': '<password>'
```

success: return {'success': true}

fail: return {'success': false, 'message': '<why fail?>'}

- User Login

POST: /api/user/login

params:

```
{  
    'username': '<username>',  
    'password': '<password>'
```

}

success: return {'success': true, 'token': '<token>'}

fail: return {'success': false}

- User Logout

POST: /api/user/logout

params: {'username': '<username>', 'token': '<token>'}

success: return {'success': true}

fail: return {'success': false}

- Check login state

POST: /api/user/islogin

params: {'username': '<username>', 'token': '<token>'}

success: return {'success': true, 'isLoggedIn': true}

fail: return {'success': false}

or: return {'success': true, 'isLoggedIn': false}

- Update user info

POST: /api/user/updateinfo

params: {'username': '<username>', 'token': '<token>',

'oldPassword': '<oldPassword>'

'newUserInfo': {

 'email' : '<email>',

 'bio' : '<bio>',

 'fullname' : '<fullname>',

 'newPassword' : '<newPassword>',

}

}

=> 'oldPassword', 'newPassword' are used when user wants to change their password

=> all properties of 'newUserInfo' are optional

success: return {'success': true}

fail: return {'success': false}

- Get user info

POST: /api/user/getinfo

params: {

 'user': '<username>',

 'token', '<token>'

}

success: return

{

 'success': true,

 'data': {

 'email': '<email>',

 'fullname': '<fullname>',

 'bio': '<bio>',

 'username': '<username>',

 'phofile_photo', '<phofile_photo>'

 }

}

3.3. Image mamangement

- Upload image

POST: /api/image/upload

Params: {

'user': '<username>',
'token', '<token>',
'image': <image-base64>

}

success: return {'success': true, 'imageUrl': '<image-address>'}

fail: return {'success': false}

- Delete image <not implemented>

Params: {

'user': '<username>',
'token', '<token>',
'imageUrl': '<image-address>'

}

success: return {'success': true}

fail: return {'success': false}

3.4. Collection mamangement

- Create collection

POST: /api/collection/create

Params: {

'username': '<username>',
'token', '<token>',
'photo': '<photoUrl>',
'name': '<name>',

```
        'description': '<description>',
    }
success: return
    {
        'success': true,
        'collection_id': '<collection_id>',
    }
fail: return {'success': false}
```

- Update collection

POST: /api/collection/update

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'collection_id': '<collection_id>',
    'photo': '<photoUrl>',
    'name': '<name>',
    'description': '<description>',
}
```

success: return

```
{ 'success': true }
```

fail: return

```
{ 'success': false }
```

- Delete collection

POST: /api/collection/delete

Params: {

```
    'username': '<username>',
```

```
    'token', '<token>',
    'collection_id': '<collection_id>'
}
```

success: return

```
{ 'success': true }
```

fail: return

```
{ 'success': false }
```

- Get collection info

POST: /api/collection/get

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'collection_id': '<collection_id>',
}
```

success: return

```
{ 'success': true,
```

```
  'data' : {
```

```
    'id': '<collection_id>',
```

```
    'photo': '<photoUrl>',
```

```
    'name': '<name>',
```

```
    'description': '<description>',
```

```
    'flashcards': [<list of ids of flashcard in the collection>]
```

```
  }
```

```
}
```

fail: return

```
{ 'success': false }
```

- Get all collection

POST: /api/collection/getall

Params: {

'username': '<username>',

'token', '<token>',

'collection_id': '<collection_id>',

}

success: return

{ 'success': true,

'data' : [{

'id': '<collection_id>',

'photo': '<photoUrl>',

'name': '<name>',

'description': '<description>',

'user_id': '<user_id>'

},...]

}

fail: return

{ 'success': false }

3.5. Flashcard mamangement

- Create flashcard

POST: /api/flashcard/create

Params: {

'username': '<username>',

'token', '<token>',

'collection_id': '<collection_id>',

```
    'word': '<word>',
    'pronunciation': '<pronunciation>',
    'meaning': '<meaning>',
    'image': '<image>',
    'order': '<order in collection>',
  }
success: return
{
    'success': true,
    'flashcard_id': '<flashcard_id>',
  }
fail: return {'success': false}
```

- Update flashcard

POST: /api/flashcard/update

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'flashcard_id': '<flashcard_id>',
    'word': '<word>',
    'pronunciation': '<pronunciation>',
    'meaning': '<meaning>',
    'image': '<image>',
    'order': '<order in collection>',
  }
```

success: return

```
{
```

```
        'success': true
    }
    fail: return {'success': false}
```

- Delete flashcard

POST: /api/flashcard/delete

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'flashcard_id': '<flashcard_id>',
}
```

success: return

```
{ 'success': true }
```

fail: return

```
{ 'success': false }
```

- Get flashcard info

POST: /api/flashcard/get

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'flashcard_id': '<flashcard_id>',
}
```

success: return

```
{
    'success': true,
    'data': {
        'collection_id': '<collection_id>',
```

```
        'id': '<flashcard_id>',
        'word': '<word>',
        'pronunciation': '<pronunciation>',
        'meaning': '<meaning>',
        'image': '<image>',
        'order': '<order in collection>'
    }
}
```

fail: return {'success': false}

- Get all flashcards

POST: /api/flashcard/getall

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'collection_id': '<flashcard_id>',
}
```

success: return

```
{
    'success': true,
    'data': [{
        'collection_id': '<collection_id>',
        'id': '<flashcard_id>',
        'word': '<word>',
        'pronunciation': '<pronunciation>',
        'meaning': '<meaning>',
        'image': '<image>',
        'order': '<order in collection>'
    }
}]
```

```
    }, ...]
}
```

fail: return {'success': false}

- Update all flashcards

POST: /api/flashcard/updateall

Params: {

```
    'username': '<username>',
    'token', '<token>',
    'collection_id': '<flashcard_id>',
    'data': [{
        'collection_id': '<collection_id>',
        'id': '<flashcard_id>',
        'word': '<word>',
        'pronunciation': '<pronunciation>',
        'meaning': '<meaning>',
        'image': '<image>',
        'order': '<order in collection>'
    }, ...]
```

```
}
```

success: return

```
{
    'success': true,
    'data': [
        {
            'collection_id': '<collection_id>',
            'id': '<flashcard_id>',
            'word': '<word>',
```

```
        'pronunciation': '<pronunciation>',
        'meaning': '<meaning>',
        'image': '<image>',
        'order': '<order in collection>'
    }, ...]
}
```

```
fail: return {'success': false}
```
